

SUBJECT: TINE KIT INSTALLATION INSTRUCTIONS

1. Remove tiller attachment from the tractor.
2. Remove the tines and hardware from one side only, leaving the other side as a pattern for the new set.
3. Install the new tines as illustrated in Fig. 2. Be sure that the sharp edge of the tine is positioned to contact the ground first. The tines turn in the same forward direction as the wheels. Do not tighten the bolts at this time.
4. Install the tines on the other side.
5. Be sure that the tines are properly installed as illustrated in figures 1 & 2, then tighten the tine bolt nuts to 17 foot pounds. Re-check the torque of the bolts after the first use and then again every 30 hours of operation.
6. If you have any questions please refer to your owners manual or contact your nearest BCS dealer.

Note: Since 1995, fig 2 has been the standard equipment tine. Both styles of tines will work on tillers newer than 1995, so long as the hub the tines bolt to is round, as is shown in fig.1
