

REDIROOT.

Roots Don't Lie

RediRoot Containers have an affordable, effective design that creates a process called air root pruning allowing for roots that are healthy, vigorous, and less susceptible to disease.

In addition to providing a container that is built to grow the strongest, healthiest roots possible we made sure that RediRoot could stand the test of time, making for a sustainable growing solution. Simply put, plants and trees grown in the RediRoot system grow better because they have better roots.

A favorite of growers- fabric bags were the original aeration containers. They have been widely used in a variety of environments from outdoors to indoors. RediRoot fabric is BPA free, made from recycled materials, and prop 65 compliant.

Benefits of RediRoot Products

- Healthy fibrous root structure resulting in efficient nutrient uptake
- Eliminates circling roots
- Reduces wet spots for even moisture and reduction of root rot.
- Virtually eliminates transplant shock
- Quicker turn times
- Maximize profits

Our Mission:

We are committed to positively impacting the world around us by supporting growers of all kinds in their efforts to grow stronger, healthier plants and trees.
